Brake Fluid Maintenance

Why Change Brake Fluid?

Over time:

- Corrosion inhibitors in fluid break down leading to damage to brake system, ABS, traction control systems and stability control systems
- The fluid absorbs moisture which reduces brake pedal response and leads to corrosion

Benefits of Brake Fluid Service

- Prolongs life of brake components
- Improves safety and reliability of brake system

How Often Should Fluid be Changed?

- Follow manufacturer recommendation
- Every two years (AAA)
- When copper content exceeds 200 ppm (MAP/UICS)
- When moisture content approaches 3%
